ReUse - ReNew - ReFit

Refit Capabilities

Steber International can Project Manage your refit no matter how large or small. A two acre undercover factory with an allocated refit area and all marine capabilities under the one roof.

All Composite FRP repairs and maintenance – A fully climate controlled composite workshop with highly skilled personnel.

Re-survey vessels – Building vessels to any survey standard is Stebers specialty. Re-surveying vessels or survey up-grades on existing surveyed craft to a higher category.

Re-power vessels – From full propulsion system and engineering upgrade to generators. Sound proofing and structural fire protection systems.

Timber cabinetry - A full carpentry and cabinet machining workshop providing acrylic bench tops with full customisation CNC machining. Full gloss hard wearing finishing.

Teak decking - Can be newly installed or rejuvenated within our factory by our well trained personnel.

Repair & replace upholstery - Our upholstery shop carries out all sound insulation, linings, vinyl, leather upholstery, curtains and full screens, all in house.

Supply & installation of marine electronics - With full qualified marine technicians, the installation of a vast range of Marine Electronics can be installed on all vessels.

Installation & service of corrosion protection system Steber International is well advanced in the technology of corrosion protection. We can carry out bonding tests provide reports and make recommendations for systems and install and verify performance.

Customised interior fitout – All vessels are custom fitted, with full CAD facilities including 3D RHYNO software. We work with the customer to design the layout that meets their needs.

Hull treatment and rejuvenation – Steber can grit blast to remove old antifouling and apply epoxy primers and antifouling of the customer's choice.
